

---

PageShop is a practical and comprehensive application that provides you with a simple means of designing and maintaining websites with animated objects, hyperlinks, images and well-organized text. When it comes to build a website from scratch, you need to have a good knowledge of HTML, CSS, JavaScript and PHP, which are not so easy to learn. Even if you spent days learning them, you will still find it difficult to make a good-looking webpage. Using PageShop you are able to insert text, buttons and fields, images and videos, adjust HTML and CSS effects and arrange all the objects to the corresponding position. Also, the utility comes with various widgets such as navigation menu, image slide and drop-down menu buttons, to name a few. Adopting a straightforward approach, the application is divided into four main regions. The first section, entitled 'Sites Management' displays all of the available pages of your website and allows you to add, remove, copy, cut, paste and clone as many pages as you want. The second section namely 'Page Management' enables you to view all the widgets of one page and allows you to customize all the properties the way you want from the right panel of the application, entitled 'Properties'. Still, the prime region that allows you to customize your website and displays how your page will look like is the 'Main Edit' panel. Here you can drag and drop as many objects as you want, edit the content of your website, insert images, format the current text, add smiles and link specific text to various websites. All in all, PageShop comes in handy when you need to create and personalize websites without learning and writing HTML, CSS or PHP scripts. Interface The application is quite easy to use, the user interface is very similar to that of any regular word processor. Indeed, you are able to move words, modify their size, color, position, style, order, insert a link or copy a selection of text from one text box to another. According to the File Associations of the application, which is set when the application is installed, MS Word documents are opened when you click on the 'Open' button in a document and edit this with PageShop. There is an option to set the application as the default document viewer in 'Options' -> 'File Associations'. PageShop is also capable of creating new documents 70238732e0 [delphi 2014 2 keygen crack](#)
