KEYMACRO is a commercial program for entering keyboard shortcuts into your scripts and applications. More than the standard Windows shortcut, the keyboard shortcuts that KEYMACRO allows you to enter are those that typically be used in the professional world of video editing, web design and writing. You can use the program to launch scripts and programs from the command line. The shortcuts are even stored on-disk so that you can use them even when the program has been closed. All you have to do to create a keyboard shortcut is to click and drag the mouse to a program, window, desktop icon or menu item that you want to associate with a shortcut. You can use it to control program windows and to launch programs with a single keystroke. The program allows you to control the windows using the keyboard using arrow keys to go to the previous or next window or using F1 to go to the Help menu. The arrow keys also enable you to move the active window. You can also press the keyboard's Home key to open the file's directory and the End key to close a window. Another useful feature of the program is the autocomplete function. This enables you to automatically enter a series of letters when you start typing. You can use it to navigate to a program, to change settings or to start a new program. For example, when you press the F4 key, it will automatically enter the Windows Explorer's address bar to navigate to the directory where you have saved your program. The program's help file provides the full list of keyboard shortcuts. You can open the help file by clicking on the File menu. KEYMACRO can create keyboard shortcuts that use modifier keys and that can even be saved. For example, the shift + F7 key combination can open the active window's Title bar to enable you to focus on the title that is currently displayed on the screen. You can create your own keyboard shortcuts or edit a shortcut that was created by another user. Finally, the program also includes a debugging tool that allows you to enter and correct keyboard shortcuts. To activate it, you have to press the Debug button on the toolbar. In addition, there is an Online Help file that provides quick access to the keyboard shortcuts. You can access it by clicking on the Help icon on the program's toolbar. The program also offers a basic graphic interface. You can create and edit your shortcuts using this interface. It consists of a main panel where you can enter the text for your shortcut, a subpanel where you can enter the program
