The Transfer Assistant is designed for transferring data from PostgreSQL to Microsoft Access databases. Its principal focus is to help programmers and managers with data migration tasks, such as import / export, search / replace, load or copy data from one database to another. The Transfer Assistant is a native tool for PostgreSQL database, it does not require any additional programs. If you need to transfer data from PostgreSQL databases to Access, then this tool is recommended.

PostgreSQL Tables To MS Access Converter Software Main Features: The Transfer Assistant provides a user-friendly interface. When you are prompted to provide your database credentials, simply enter the database username and password, and click the Next button to continue. When you want to convert tables, just select the table you need to migrate, and click the Next button. This tool allows you to specify the SQL code that you would like to use in the process, allowing you to customize your database conversion. After the import is completed, you can see the resulting data in the Access-compatible database. Just browse the tables and start working with them, as if it was a regular Access database. The program has a direct Import / Export functionality, allowing you to copy data from the imported tables to your database, or vice versa. A text file can be exported containing the SQL queries you used during the conversion. In addition, the conversion results include the SQL code, which can be edited and executed on your database to see how the data was migrated.
