We describe the experience in our center using a new endoscopic technique for the treatment of hemodynamically unstable patients with severe blunt abdominal trauma. This technique is performed without an access incision and is known as the laparoscopic incisionless technique. Patients were included if they presented with unstable hemodynamics and/or severe blunt abdominal trauma. A trocar was inserted in a supraumbilical position through an umbilical incision of 1 cm length. This trocar was then used for the laparoscopic incisionless technique under direct visual control. For patients without significant hemodynamic instability, the laparoscopic incisionless technique was performed. For patients with hemodynamic instability, an attempt was made to stabilize the patient before performing the procedure. In cases of a negative intraabdominal pressure test, the procedure was converted to laparotomy. Data on patients' age, gender, hemodynamic status, need for laparotomy, and postoperative complications were collected retrospectively. A total of 13 laparoscopic incisionless procedures were performed in 12 patients (9 males). Four procedures were performed in patients who were hemodynamically stable. In the remaining 9 cases, the laparoscopic incisionless technique was successful and converted to laparotomy in 5 cases because of

hemodynamic instability and in 4 cases because of anatomical difficulties. In patients who underwent laparoscopic incisionless technique, 3 patients developed a complication (2 pelvic abscesses, 1 postoperative ileus) and 4 patients had to be transferred to the ICU postoperatively. The patients who underwent laparotomy for the treatment of their injuries developed 4 complications (1 intra-abdominal abscess, 1 small bowel fistula, 2 pelvic abscesses). The laparoscopic incisionless technique is a simple technique that does not require abdominal incisions and is useful for the treatment of patients with severe blunt abdominal trauma. When indicated, this technique is safe and has a low complication rate. For the six years that he has served as President of the SUSY
