Monsters and mythical beasts were part of myth and legend from the dawn of man. Ancient stories of mythological creatures have captured the imaginations of people throughout the.Solubility enhancement and oral delivery of cephalexin by dextran-coated nanocapsules. The solubility of cephalexin was enhanced by incorporation into nanocapsules of poly(ε-caprolactone-co-2-pyrrolidone-co-ethylene glycol-co-methacrylate) copolymer. Cephalexin loaded polymeric nanocapsules (100-200 nm) were prepared by interfacial polycondensation technique and characterized for the size, morphology, encapsulation efficiency, and release kinetics. Cephalexin-loaded polymeric nanocapsules demonstrated improved solubility in comparison to free drug and presented improved dissolution profile in distilled water and in 0.1 M HCl. The results from in vitro release studies revealed that the drug release was sustained and complete within 12 h and that the drug release rate was faster in 0.1 M HCl (37.3 %) than in distilled water (22.8 %). The results showed that the addition of Cremophor EL (surfactant) to polymeric nanocapsules facilitated the solubility of cephalexin. The morphology and the particle size of the cephalexin-loaded polymeric nanocapsules were unaffected after lyophilization and storage. The in vitro cytotoxicity studies showed that cephalexin-loaded polymeric nanocapsules did not show any toxic effect on Sf9 cells after 48 h of exposure. Cephalexin-loaded polymeric nanocapsules were non-cytotoxic at 1 mg/mL. The plasma concentration-time profiles in rats indicated that cephalexin-loaded polymeric nanocapsules presented higher oral bioavailability than the free drug. Thus, the results suggested that nanocapsule formulation can be considered as an efficient strategy to enhance the solubility and oral bioavailability of poorly water-soluble drug, cephalexin.Bacterial uridylate kinases.
