Elements 10 includes Photoshop Elements features that make it easier for new users to start working with this powerful yet affordable image editor. Photoshop editing basics Elements in Photoshop Photoshop has two main file formats, as explained in the next sections. They are referred to as the Photoshop (PSD) file format and the Photoshop Album (PSA) file format. The PSD file format is the native file format of Photoshop, and it is used by all components of Photoshop. The PSD file format is a text-based file, so it will appear when you open a file in

---

Photoshop as plain text. The other format, the PSA file format, is Adobe's own file format. The PSA file format stores all of the tools, graphics, and other content that you created in Photoshop. You can view the files in PSA format just as you can view PSD files. The editing tools you apply to PSA format files are saved in PSD format. When you save an image file using Photoshop Elements, you have the option to save the file in the native Photoshop PSD format. When you save the file in the PSD format, it will open and display the file just as it does in the PSD format. Also, if you import an image into Photoshop Elements, you can save the

---

image in the PSD format as well, and the image will appear exactly as it did when it was imported into Photoshop Elements. Opening Photoshop files

Before you open a file in Photoshop, you must first import it into Photoshop. You also need to select which program you want to use to open the PSD file — Photoshop or Photoshop Elements. You can open PSD format files in many programs, including Photoshop Elements, but you can only open PSA format files in Photoshop. To import a file into Photoshop Elements, follow these steps: 1. Choose File⇒Open. The Open dialog box appears. 2. Select Photoshop Elements from the drop-

---

down list. 3. Navigate to the folder location for the file you want to import. 4. Select the file and then click Open. Photoshop opens and displays the image as a raster image. If the file is a PSD file, it appears as plain text. To import a file into Photoshop, follow these steps:

1. Choose File⇒Open. The Open dialog box appears

(Reuters) - In the early stages of negotiations for a new collective bargaining agreement, Michael Moritz told contract employees at Apple Inc's retail stores in several cities that there were three classes of employees in the U.S.: "regular," "partner," and "better." A new logo for the new retail stores is displayed at a retail store of the Apple Inc. in San Francisco, California, U.S., January 4, 2018. REUTERS/Kate Munsch The "partner" class was made up of employees with flexible hours and benefits that allowed them to work at different stores and times. "Better"

---

employees were those with a “psychological contract” that kept them at the company year-round and encouraged them to spend the extra time and effort needed to become partners. The meeting took place in November of 2017 at the Apple store at the Time Warner Center in New York City. Apple Stores are the company’s primary outlet for its products, including the iPhone, iPad, iPod and Mac computers. About a year later, in a meeting held at Apple’s corporate offices in Cupertino, California, Moritz made the same pitch to the 10,000 associates at Apple Retail stores that the company had announced a year earlier. Signs posted by the

---

company in the company-owned stores in late October warned that anyone who did not opt in by the end of the year would not be eligible for flexible benefits or job offers and would be placed in a new class known as “unassigned.” That shift was official on Dec. 31. “The issue at the end of the day is if you get to be an R (reduced hours) or become an U (unassigned) or if you get to take other roles, if we put you in the S (standard) roles,” said one retail employee who was at both meetings. “How do you get to stay in the S roles?” the employee asked. “That’s a challenge,” said Moritz. The employee said that the meeting had the same kind

---

of tone in 2017. “You were being told in no uncertain terms, ‘if you’re not sure what you want, we’re not going to be offering this to you.’”

Q: Vue Router (vue-router-lib) Go to Login Page I have two routes, sign-up and login. Both can only be accessed when the user is logged in. If I logout and go to the sign-up page, the login page should show and I can log in to the site. When I log out and go to the login page, it should direct me to the sign-up page. I tried to do this with VueRouter. I have set up the route to check if a user is logged in, and when the user is logged in,

---

it should direct the user to the sign-up page. Here is my Route configuration:

```
this.$router.beforeEach((to, from, next) => { if (to.meta.token) { console.log(`Before: ${to.meta.token}`); next(); } else { next('/login'); } });
```

But this will always jump to the login page. How can I do this? A: I don't believe that you can achieve this with the built-in router. It seems as though you need to alter the session to indicate whether the user is logged in. For this, you can use a localStorage item with a value of "true" for a user logged in and false for otherwise. Then, in the next route you set the before each to check against this. See what I did in the following sandbox
