The result is that the feeling of truly being in the action is delivered to more authentic, realistic levels. The HyperMotion Technology is available to play in all modes, including the Story Mode, Training Mode, Online Leagues, Online Tournaments and the Ultimate Team Mode. Extensive play testing and response from the entire FIFA community has shown that the enhanced real-world physics represent the pinnacle of authenticity for this aspect of FIFA gameplay. HyperMotion is an all-new, major element in the complete physics model. As a result, HyperMotion Technology allows fans to immerse themselves in the real-world sensation and emotion of the sport, delivered at the level of the professional player. The game design committee sought to deliver the best, most authentic gameplay experience possible and that was achieved by introducing HyperMotion. The most obvious benefit from this is the improved ball control in gameplay. Players are able to move the ball naturally through the air, rather than the ball rushing toward the player. The ball behaves in a more realistic, natural way and the development team is confident that fans will notice a significant improvement in ball control as a result. FIFA 22 introduces "HyperSpeed" which provides more natural ball control and the player's ability to accelerate the ball naturally. Once a player has control of the ball, they have the freedom to use both feet to accelerate the ball. Players can use this feature to either accelerate the ball up the pitch or swing the ball into oncoming opposition players, offering more tactical options. This is a major new feature of FIFA and it will enhance the player's experience and flow of gameplay. In addition to ball control and HyperSpeed, FIFA 22 introduces "Dynamic Player Trajectory." The player's collision with the ball is calculated to the second, making every pass, dribble and shot more precise. Because the physics models incorporate reaction time and can react to player movement and heading, the ball will adjust and drift from the player's intended route. This added unpredictability adds a level of depth and strategic gameplay to the game. In all modes, it is now easier to avoid the ball. Players have the ability to accelerate and decelerate the ball and use their full body weight to steer the ball in a wide variety of directions. In the game, the ball's reaction will also be affected by its position on
