Wunderdoktor

Trine is a platformer/puzzle game with 3 distinct worlds, all set in the same universe, with new unique elements for each world. We want you to feel like a skilled tactician as you complete each level, but we also want you to build a lot of those skills. Each world is different in its mechanics, its dangers, and its challenges. The simple controls make the game a lot of fun to play. We are adding new content to the game regularly, and you may even see some world bosses coming soon! Story: Trine is a world in which sorcerers, warriors, and enchanters battle sorcerers, warriors, and enchanters. The art style is that of an illustrated version of a cartoon, though it isn't a parody. The central antagonist is Ormus (it is in his nature to be an evil sorcerer), and the central hero is Amadeus (he will never be evil in our setting), the King of Artorias and rightful heir to the throne of Artorias. Artorias and all its stories are connected by a system of gates. Worlds: Anima The art style is similar to the style of the UI in Trine 2. Anima is a curious world, full of creative puzzles and a lot of hidden secrets. We really hope you enjoy being creative and find a lot of new ways to solve puzzles in this world. It's kind of a comic book! Bello Bello is one of the most difficult worlds in the game, and also the second-longest. It has a lot of very difficult puzzles and enemies, and a lot of secrets are hidden in the darkness. We believe Bello to be the most dangerous of all worlds. It's full of spikes and pitfalls! Baobab Baobab is a world full of friendly plants. It's one of the most colorful worlds in the game. We are sure you will have a great time discovering the many plants that inhabit this world, and we hope you won't harm them in the least. The plants have become bored of the world, and they have become lazy and dozed off. It's a relaxing world that you should enjoy. Technical: Trine is built with the Unity Game Engine. It's a very powerful engine, and we are using it as a foundation for our new ventures into the games industry. The game is set in the future, in a version of

Features Key:

- A unique story with innovative characters and trenchant conflicts
- Theater of operations, plus the unique „AMMO" system featuring special powers
- Embark on an exciting campaign with countless hours of gameplay

Wunderdoktor

Q: Thymeleaf - Validation for Bootstrap Datepicker integration I've been trying to implement a reusable component for datepicker form field validation which will allow for user to pick a fixed value per date per field. I was able to get the code of working for the most part, but the datepicker validation is trying to call the validateDate() method which allready seems to be initiated by Bootstrap. Is there anyway to get the Bootstrap datepicker validation scripts to ignore the thymeleaf validation? Or at least seem to set a prop to stop validation? Code:

System Requirements:

OS: Windows 7/8/8.1/10 Processor: i5 6th Gen/i7 7th Gen Memory: 8 GB RAM Graphics: NVIDIA GeForce GTX 970 / AMD Radeon R9 290 DirectX: Version 11 Network: Broadband internet connection Storage: 15 GB available space Additional Notes: This product is an Enhanced Digital Copy of the game and a Game Disc.
