Kaspersky internet security key is an excellent tool which is secure with a lot of benefits. is the single antivirus which protects your whole personal computer and it has a strong performance too. Download Kaspersky full version for pc free, The very impressive and powerfull antivirus software for windows 7/8/10 and Mac. Kaspersky Internet Security 2016 Crack + Keygen Features:This invention relates to novel phosphate esters of dibasic alkyl naphthalenesulfonates and, more particularly, to bis-naphthalenesulfonates as well as their use as phase change agents. Phase change materials, particularly fatty acids and glycols, can be used as heat transfer media at certain temperatures. Their thermodynamic properties and characteristic physical properties make them advantageous for heat storage and heat recovery. Fatty acids and glycols are used in application ranging from automobile air conditioners to large electric power transformers, to name but a few. U.S. Pat. No. 4,315,761 discloses certain naphthalenesulfonates and shows their utility in phase change heat transfer materials. A. J. Heffernan, Jr., "Liquid-Liquid Phase Transitions in Simple Fluids and Surface Evaporation from Naphthalenesulfonates," Chem. Commun., 607 (1975) discloses the use of dialkyl naphthalenesulfonates of decyl alcohol, dodecyl alcohol, tetradecyl alcohol, n-butyl alcohol, hexyl alcohol and octyl alcohol, and the monoalkyl esters of 1-naphthyl and 2-naphthyl alcohols in cooling or heat storage. The phase change materials in accordance with the present invention comprise a composition having the formula: ##STR1## wherein R.sub.1 and R.sub.2 are each a saturated alkyl chain containing 7-17 carbon atoms, or a saturated cycloalkyl or alkyl group containing 5-20 carbon atoms. It has now been discovered that bis-alkyl naphthalenesulfonates are suitable as phase change heat transfer materials. It has also been found that they have a greater phase change temperature than the materials of the prior art. At a House Judiciary subcommittee hearing on Wednesday, Apple CEO Tim Cook discussed the FBI's demand for a passcode on an iPhone belonging to an infamous San Bernardino shooter. "That didn't
