**Autodesk Actrix Technical 2000 |LINK|**

Softdesk Support and Consulting was rebranded as Apex Software on 11 April, 2012, Apex will continue to support Autodesk via Actrix. In exchange for this, Apex will be promoted to Softdesk customers by Autodesk and all files and customer data will continue to be stored in the Softdesk Data Centre in Barcelona, Spain. Softdesk and Autodesk have been working together to provide Autodesk customers the opportunity to move to Softdesk products through dual licensing, which includes access to both Softdesk DWGfile and Autodesk DWG files. Dual licensing customers can either subscribe to Softdesk or Autodesk. If they subscribe to both Softdesk and Autodesk they retain the ability to access the other companies products through Softdesks own channel with no change to their pricing for either of the software licenses. Softdesks customers

---

are entitled to all Autodesk's new releases in addition to support for the Softdesk DWG files and the Softdesk DWG file format itself. The relationship between Softdesk and Autodesk started in 2001. The first Softdesk client license was purchased in 2001 by Autodesk for its software projects and it included access to Softdesk basic apps and data base. While many of the Softdesk apps and functions were shared with a variety of Autodesk products, there were some unique features that were built specifically for Softdesk. The main functions are a DWG file editor, DWG file visualizer, DWG drawing manager, BOM report writer and IT Asset Management solution. With this integration the customer received better data management and better management of on-line data.

## **Autodesk Actrix Technical 2000**

Despite difficulties with the sale, having released the two software toolkits in 2008, Autodesk is still making pretty good money of it. So much so that its taking on many new AutoCAD features (like parametric families, annotating, and even 3D) and redeveloping old ones (customizable menus, toolbar access), as well as a large team of developers. Autodesk remains the dominant player in 3D CAD, with its products enjoying consistent mainstream success and popularity. So, not surprisingly, its also made a lot of money in the last few years. It has made a tremendous effort to aggressively reduce costs (and to try to raise revenue). For the time being, its all about the realisation of the Autodesk's BIM strategy, and, it believes, the success of this strategy will be driven by how well it integrates with other Autodesk's products. Its going to be fascinating to see how BIM develops, and how other companies will shape the space. Autodesk is investing in this area and is looking to integrate AutoCAD into BIM applications. It will be interesting to see how this plays out. The intent is to develop an open BIM framework that supports the three major CAD packages. Thats the Autodesk strategy, and thats where the company sees the future. Obviously its not going to be consistent

---

across all of its product line, and it will not make a habit of buying companies. As long as its industry specific and focused, its not going to get into the office productivity space. Its stuff no one else has done, and its going to end up with a 90% share. Softdesk and Autodesk will continue to work together with our customers who want to combine the two solutions, but the softdesk actrix product will be retired. It was originally released as a softdesk actrix 2000 product in October 2008. 5ec8ef588b
