Thermal and mechanical expansion joints are used throughout the world for piping systems, as safety devices, or to isolate equipment. EJMA standards of construction apply to mechanical expansion joints, chemical expansion joints, and chemical expansion couplings. The following documents provide more information about expansion joints. Series EP externally pressurized expansion joint, Series FFB free flexing metal expansion joint, and single unit expanding joint are used to connect piping systems to flow a fluid such as steam or water. Match set expansion joints are used with round, square, rectangular, or oval, round square, rectangular or oval piping systems to connect the pipe ends. The inner pipe within the piping system is called the inner liner. The outer pipe is the outer lining or cover. The series expansion joint connects the inner liner to the outer covering and controls the movement of the inner liner relative to the outer covering. The series EP expansion joint seals the inner liner to the outer covering and provides a flexible connection to allow the movement of the inner liner relative to the outer covering to accommodate the expected expansion and contraction of a piping system. The series FFB expansion joint controls the motion of the inner liner. The inner liner is placed in the outer liner and the outer liner is fixed on one end. The series EP expansion joint is placed between the inner liner and the outer liner and held in place by a bellows. The bellows is made of stainless steel and provides a flexible connection to allow movement. A gasket ring or other seal material is placed between the inner liner and the bellows to prevent leaking of fluid.

## **Ejma Standards Pdf Free 16**

One way to eliminate these differences in design results is to harmonize the standards through development of a consensus standard. We have been a part of the International Working Group on Expansive Joints. The first IWGEJ was formed in 1995. It conducted a study of the various expansion standards at that time in order to harmonize and simplify the standards. New ejma standards pdf free

---

16 The first edition of EN 13445, the European standard for 'Externally pressurized expansion joints' was published in 2000.

These codes include internationally accepted design standards for Externally Pressurized (EP) expansion joints, and standards for the configuration of Externally Pressurized (EP) expansion joints with reference to the design and operation of the fully assembled joint. The suggested EN 13445 standards are applicable to a

---

wide range of applications including industrial, commercial and power generation systems. The objective of this publication is to provide a consistent and harmonised set of design and operation criteria and equipment requirements for these joints with reference to both the inner- and outer- pipe. This publication also describes the materials and methods to be used for the production of joints. EN 13445 is the first truly standard version of this code. The most recent

---

International Standard, entitled EN 13445.2 -2001, 'Externally pressurized expansion joints' is a revision of the EN 13445 standards including the addition of new specifications in the chapter 7, Component/Equipment. This standard establishes a series of requirements and specifies the physical construction of externally pressurized expansion joints and associated equipment. It also provides design methods for a detailed design of the expansion joint and its component parts; the

---

test procedure (for corrosion resistance, functionality and durability); tolerances; and the physical and electrical requirements for control, protection and safety of the expansion joint. 5ec8ef588b
