The latest version of Photoshop, Adobe Photoshop CC 2019 for OS X was released on October 18th, 2019. If you are on the Mac side of the house you can download the application from the Mac App Store. I am running the latest release candidate and it appears as if they changed the application icon. On initial installing of the application the icon makes you think that it is ready to use. On subsequent launches the icon appears to be using a preview look to indicate an application is "in use" and to let you know that it actually is starting. Read on to see how I feel about the new look. Attempting to run the installer I was successfully accepted. However, a problem with the updated site being accessed presented itself and the installation of Photoshop also stopped. Adobe indicated that it would be resolved in the next day or two. For now I will be using the Lightroom installation that I was working on previously. Adobe provides a download link for the update to the application. I will be using the Mac version of the application and will not attempt to repeat the software update process on my Windows side. Adobe indicates that the "In Progress" file does not represent that the application is fully installed. I will use the Update menu to view the available versions of the software. I then attempted to update the latest software release. The Update to Pro version of the app had not been downloaded and the installation ended with the following error message. "Adobe Photoshop CC 2019 is already installed on your system. Proceed anyway?" Yes, I am very sure that is the case. Click "yes" and update the software. The application exited, saying the software was successfully updated. NOTE: This was the first time I ran the application since updating from Lightroom 4.3 to 5.2. I will continue using the update menu to verify if new features are available. Photoshop is up and running. (4/5)

Share for Review: User collaboration lets multiple people edit an image simultaneously. This feature is designed to allow users to work together without leaving Photoshop. From your Photoshop Elements desktop app, find a photo. Click Get Started in the Output panel (Image > Output > Get Started). Then, pick a file to export to the cloud and select a device. The OS X app shows the file on your desktop and opens a browser where you can view and download the file to your computer. **Notifications:** These pop-up messages give you additional ways to be alerted about major changes to your photo. For example, if you've selected a file to export, a notification will tell you when the job is done, and it'll also let you know if the destination is updated. The app can also notify you if you haven't changed the destination in some time, but has been editing the image. **Cutout:** Tracks and eliminates unwanted bits of an image automatically. If you select a portion of the image with the Magic Wand tool, that area is automatically registered as a "container," and you can fill it with any color or pattern, or cut out an object from the image. Or, if you're using these tools to guide the selection, you can use the Mask tool to confirm or change areas selected by the other tool. From your Photoshop Elements desktop app, go to Image > Mask. This tool has many varieties, from simple to advanced. **Enhance Colors:** Objects of different colors appear more vibrant and radiant than in the original image. This feature works best with one simple photo. From your Photoshop Elements desktop app, go to Enhance Colors. Use the Basic panel to change the colors of your image, the White/Black panel to control the skin tone, Eyes panel to adjust eye and eyelash colors, to choose the skin tone color, and Overlay panel to change the background image and color. From there, choose a preset or blend of colors for Normal, Sunlit, Dark, Sepia, Vintage, and many more.
